**NEPTUNE HOSE COMPANY NO. 1 OF DRYDEN, INC.**  
**W.B. STRONG FIRE COMPANY OF FREEVILLE, INC.**  
**VARNA VOLUNTEER FIRE COMPANY, INC.**

**CONSULTING and RECOMMENDATIONS**

Pursuant to our engagement with the Town of Dryden, we have audited the financial statements of the Varna Volunteer Fire Company, Inc., W.B. Strong Fire Company of Freeville, Inc. and Neptune Hose Company No. 1 of Dryden, Inc. as of and for the year ending December 31, 2002. In each of these audits we issued an unqualified opinion, stating that, in our opinion, the financial statements presented fairly the financial positions of the Companies as December 31, 2002.

The Etna Volunteer Fire Company did not respond to our scheduling and informational requests; therefore, we did not undertake an audit of that entity.

In accordance with the terms of our engagement, we are providing additional information and recommendations with respect to the companies' apparatus and capital reserves.

### **Apparatus and Equipment**

Each of the departments provided us with listings of their apparatus and the equipment maintained on each of these vehicles. We engaged Scott Pronti to perform an observation of the equipment. Mr. Pronti served as Assistant Chief of the Lansing Fire Department for 3 years and he has been a member of the Lansing department for 15 years. He also was a member of the Lansing Fire Department's specification committee for the following apparatus: heavy rescue vehicle, pumper/tanker and aerial platform.

Mr. Pronti was provided with apparatus and equipment listings and he verified that the apparatus was present and that the equipment was present on the vehicles. He observed that the equipment present agreed with listings with only some minor exceptions. He felt that the apparatus and equipment was well organized and appeared to be well maintained. Mr. Pronti's report and the inventory lists are attached as addendum to this report.

Mr. Pronti indicated to Sciarabba Walker that the companies' apparatus and other equipment was adequate, and he did not feel that the companies were maintaining excessive levels of equipment or purchasing equipment that was extravagant or superfluous to their mission.

The fire departments noted, and we concur, that their present apparatus generally allows them to make an appropriate "first response" to emergencies in their area. Although the departments operate under mutual aid agreements that, in effect, allow for the sharing of apparatus, the coverage area is vast and departments need to have the appropriate types of equipment to make timely responses to emergencies in their primary coverage areas. We felt that the additional pumper and the aerial platform owned by Neptune were appropriate, given the residential and commercial buildings within that department's primary coverage area.

## Financial Condition and Replacement Reserves

We noted that the departments appeared to be financially healthy. The following is a summary of the department's key balances and results as of 12/31/2002:

	<u>Varna</u>	<u>W.B Strong</u>	<u>Neptune</u>
Cash and investments	\$ 413,258	\$ 381,091	\$ 616,563
Long -term debt	306,480	-	347,018
Replacement reserves	367,138	371,385	516,784
Increase (decrease) in net assets	( 41,218 )	48,762	127,754
Increase (decrease) in cash	\$ 17,458	\$ 48,762	\$ 145,823

The increase or decrease in net assets also includes foreign fire funds, which are not available for general operational purposes.

Each department's budget included a line item for funding the replacement reserve. The individual departments had developed calculations regarding the tentative replacement dates of their apparatus and had estimated replacement costs based on historical prices, plus an inflation multiplier. The estimated annual returns on the investments were in the range of 3% to 5%. The allocations to reserves also included smaller amounts to fund reserves for building improvements, equipment upgrades and communications.

In reviewing the underlying assumptions and the projected cash flows from the replacement reserves, we did not feel the reserves were excessive. It appears that two of the departments, Varna and W.B. Strong, will not be able to meet their replacement schedule without incurring additional debt. However, we did not feel that any of the reserves were grossly under-funded as of December 31, 2002.

To determine the correct annual contribution to replacement reserves, the Town needs first to work with the departments to develop a clear understanding of the equipment purchases that are to be funded from the reserves, estimated costs of that equipment, dates of replacement and the estimated annual return on the reserve.

We noted that each department is utilizing slightly different methodologies for estimating replacement dates and costs. Replacement funding is currently reported on budget submissions along with current operating expenses. There is a potential source of confusion in trying to distinguish current operating expenses from reserve designations, as it appears that each department reports these slightly differently. We recommend that the Town, in conjunction with the departments, develop a standardized form for the departments to report the specifics of their replacement reserves and detail the annual budgeting to those funds. The form could include assumptions regarding rates of return, inflation and targeted replacement dates. We feel that standardizing the reporting will facilitate a clearer understanding on the part of Town administrators as to the portions of the Town's funding that are designated for annual operations and for reserves. The Town may also be able to consolidate this information and develop a single spreadsheet that summarizes each department's replacement schedule. This would allow

the Town to have a clearer understanding of the broad scope of equipment purchases and facilitate coordination of the timing of purchases among the departments.

The methodology for calculating the proper annual contribution to the replacement reserve is based on a projection of the replacement cost. Then, using an estimated annual or periodic rate of return, the required annual contribution can be calculated in order to reach the desired replacement cost over the anticipated timeframe. Two methods for estimating whether the annual funding of the reserve is appropriate are as follows:

- If the Town is provided the departments' asset depreciation details and the departments in turn provide the Town information regarding which assets are to be replaced from the reserves, annual depreciation on those items should approximate the amount that is being funded to the reserve for those items. Since depreciation is based on historical costs, annual depreciation must be adjusted for inflation to properly serve as an indicator for the amount that should be deposited to reserves. It is also imperative that useful lives assigned to assets for depreciation purposes be congruent with useful lives for replacement purposes.
- Annual cash flow, after adjusting for major fixed asset purchases, should approximate the amount that is deposited to the reserve. If annual cash flow greatly exceeds the amount that the department has budgeted for reserves, it could indicate over-funding. This methodology is best applied to multiple operating cycles. When applying this criteria, it is also important to keep in mind that the departments have other funding sources that provide intermittent revenues used to boost reserve funding or for special projects. For example, in 2002 two departments received grants totaling \$15,000 and \$4,400, respectively. One department noted that obtaining grants involved considerable effort on the part of their volunteers and they felt the effort would not be worthwhile if the additional funds generated by grants were used to supplant, and not to supplement, their contract income.

We feel that any decision regarding the appropriate annual contribution to reserves should be arrived at cooperatively with the fire companies. It is noteworthy that the management of capital reserves and capital purchases has fallen to the fire departments for decades and there is no evidence to suggest that they have mismanaged this responsibility. We were generally impressed with their knowledge of equipment specifications and special customizations necessitated by their coverage areas. It appeared that major purchase decisions were arrived at only after thorough exploration of options and careful consideration by the membership.

## **Accounting Records**

We made recommendations for improving accounting procedures and records to each of the companies we audited. Those recommendations were included with the audited financial statements submitted to the Town of Dryden.

Standardization of reporting could improve comparability and increase understanding of fire company operations. We recommend the following standardized documents:

- Regardless of whether annual audits are required, we recommend that the companies report their year-end financial position and operating results on a standard form. The form could be designed to report the key components comprising assets, liabilities, revenues and expenses. If audited statements are to be furnished, the auditor could also certify the annual report.
- Comparability and understanding of annual budgets would also be enhanced if the departments were reporting on a standardized form with a prescribed presentation format and uniform account descriptions.

Of the departments, only Neptune was preparing an annual financial statement under professional standards utilizing generally accepted accounting principles (GAAP). However, each department we audited was utilizing internal reporting that fairly presented the details of assets, liabilities, income and expenses. Additionally, and most importantly, each company had controls over its accounting processes and essential activities (bank reconciliations, deposits, exercise of board authority and approval over spending) were regularly performed. Both Varna and W.B. Strong have informed us that they are in discussion with accountants regarding the preparation of annual financial statements.

Neptune was the only company incorporating the historical costs of equipment, and depreciation on equipment, into their financial reporting. With the assistance of department personnel from W.B. Strong and Varna, we compiled information on the historical costs of equipment, estimated the useful lives of equipment, and calculated prior accumulated depreciation and annual depreciation expense for 2002. At the conclusion of our audits, we submitted fixed asset and depreciation details to the respective companies so they could maintain these details prospectively.

Neptune and Varna are reporting under the accrual method, W.B. Strong reports using cash accounting. Although W.B. Strong's financial statements would not have been materially different using the accrual method, the Town may want to specify that the departments use the same accounting method for reporting purposes.

**EQUIPMENT OBSERVATION**

Prepared by Scott Pronti

## **Neptune Fire Company**

On 11/01/2003 an audit was conducted of the Apparatus and equipment of the Neptune Fire Company. Each vehicle and its equipment was inspected to verify accuracy of inventory, appropriateness of equipment, and overall condition of equipment. The staff of Neptune was courteous and willingly assisted in the audit.

### Apparatus

The Neptune Fire Company has (2) Engines (Pumpers), (1) Aerial Platform, (1) Tanker, (1) Heavy Rescue, and (1) Utility Pick –Up equipped with removable fire pump.

The apparatus was well maintained and appropriate for a town the size of Dryden. When additional apparatus are needed for emergency calls neighboring departments respond according to an established Mutual Aid plan.

Neptune's apparatus is up-to-date with its most recent purchase being the aerial platform. Neptune is currently working on developing specifications to purchase a new heavy rescue. The current heavy rescue is approximately 15 years old and due to the growth of equipment that must be carried, it is at or slightly exceeding its storage capacity.

### Equipment

All equipment on each piece of apparatus was verified (See attached inventory sheets). The equipment was well organized and well maintained. Each piece of apparatus had the appropriate equipment for its role. One piece of equipment that Neptune has recently purchased that is unique to the other departments audited is a Thermal Imaging Camera. This is fairly new technology to the fire service and is growing in use.

## **WB Strong Fire Company**

On 7/8/2003 an audit was conducted of the Apparatus and equipment of the WB Strong Fire Company. Each vehicle and its equipment were inspected to verify accuracy of inventory, appropriateness of equipment, and overall condition of equipment. The staff of Neptune was courteous and willingly assisted in the audit.

### Apparatus

The WB Strong Fire Company has (1) Engine (Pumper), (1) Rescue / Pumper, (1) Tanker, and (1) EMS Suburban.

The apparatus was well maintained and appropriate for a town the size of Freeville. When additional apparatus are needed for emergency calls neighboring departments respond according to an established Mutual Aid plan.

The apparatus at WB Strong, while not as current as the other departments audited, is currently meeting the needs of the department. WB Strong feels that the Rescue / Pumper will be the next piece of apparatus replaced. This piece of apparatus is currently overloaded and underpowered as it is being utilized.

As an observation, WB Strong's Pumper is equipped with a 10-speed manual transmission. This transmission is more complicated than a standard manual transmission and may limit the number of members that can operate that piece of apparatus. As WB Strong develops specifications for future apparatus it is suggested that they investigate automatic transmissions to address this issue.

#### Equipment

All equipment on each piece of apparatus was verified (See attached inventory sheets). The equipment was well organized and well maintained. Each piece of apparatus had the appropriate equipment for its role.

#### **Varna Fire Company**

On 6/30/2003 an audit was conducted of the Apparatus and equipment of the Varna Fire Company. Each vehicle and its equipment were inspected to verify accuracy of inventory, appropriateness of equipment, and overall condition of equipment. The staff of the Varna Fire Company was courteous and willingly assisted in the audit.

#### Apparatus

The Varna Fire Company has (1) Engine (Pumper), (1) Tanker, (1) Heavy Rescue, (1) Mini Pumper, and (1) EMS Suburban.

The apparatus was well maintained and appropriate for a town the size of Varna. When additional apparatus are needed for emergency calls neighboring departments respond according to an established Mutual Aid plan.

According to the staff at the Varna Fire Company the next piece of apparatus that will be replaced is the 1988 Pumper. With the exception of the 1984 mini pumper all of the other apparatus have been replaced with 1997 or newer equipment. In addition the 1988 pumper is equipped with a complicated manual transmission that limits the amount of members who can operate the apparatus.

#### Equipment

All equipment on each piece of apparatus was verified (See attached inventory sheets). The equipment was well organized and well maintained. Each piece of apparatus had the appropriate equipment for its role.
